

FIND MAXIMUM VALUE IN LED LIGHTING UPGRADES

Denovo serves to educate clients hungry for smarter, more sophisticated lighting solutions.

A NEW LENS ON LIGHTING

At Denovo, we know facility operators are always looking for solutions that provide dramatic savings with simple paybacks. LED lighting can be that answer, in more ways than you realize!

Your Primary Objectives:

- + Reduce Energy Usage
- + Improve Visual Conditions
- + Decrease Maintenance and Replacement Costs

Bonus Benefits - Business Outcomes:

- + Increased Employee Productivity
- + Reduced Employee Turnover
- + Health & Safety Advantages

CUSTOM SOLUTIONS

As engineers, we have broad exposure to emerging products, and we are not held captive to specific manufacturers. We source the right products and controls systems for individual settings specific to your applications and interpret your eligible rebates into real economic savings.

Once your LED lighting project has been identified and Denovo analytics have been completed - our project engineers will arm you for success. You are provided with calculations demonstrating definable energy savings, favorable payback, and explanation of improved conditions for project approval.

THE FUTURE OF LIGHTING STARTS HERE

As researchers, we engage with prominent individuals and institutions leading the way towards a more thorough understanding of LED lighting's applications in productivity, emotional impact, and biological needs. Research has recognized the following results when both lighting and human centricity is considered:

Industrial Facilities

- Increased Worker Productivity
- Reduced Fatigue through Limited Direct Glare
- Decline in Production Errors
- Decrease in Health & Safety Incidents

Office Space

- Boosted Productivity
- Improved Work Accuracy
- Reports of Feeling "happier and healthier"
- Improved Sleep Habits

Senior Living Facilities

- Significant Decrease in Trip and Fall Incidents
- Reduction in Anti-anxiety Medication Intake

Agriculture

- Increased Production of Egg and Meat Sources

Educational Facilities

- Fewer Errors in Concentration Testing
- Increase in Reading Speed
- Reduction in Hyperactivity Under "Calm" Lighting

Sport Venues

- Increase in Detailed Visual Acuity
- Elimination of Stroboscopic Flashing in Photography, Recordings & Playback

LED IS MORE THAN A QUICK BULB SWAP

Nothing is changing as rapidly in building sciences as lighting. When facility managers want to tackle a lighting upgrade, the most common reaction we hear is:

"This is WAY MORE COMPLEX than I thought!"

Simply swapping out bulbs is not the answer. With a wide variety of fixture types, the distribution of light can significantly differ between products, and in some cases, rob you of the efficiency advantages of LED technology.
